

18. The combination as recited in claim 14, wherein the two saddle-shaped coils are the vertical deflection coils.

AZ  
19. The combination as recited in claim 14, wherein the means for modifying the magnetic field extend, in a plane perpendicular to the Z axis, about a mean radial direction of between 60° and 90° measured with respect to the direction of the plane of separation of the two coils of the same pair.

20. The combination as recited in claim 14, wherein the means for modifying the magnetic field are arranged on both of the saddle-shaped coils of the same pair, symmetrically with respect to the Z axis.

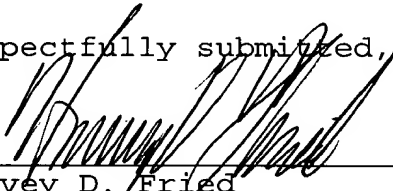

21. A cathode ray tube in combination with a deflection yoke as recited in claim 13. --

REMARKS

This Preliminary Amendment is presented to delete multiple dependencies in the claims as filed.

Date: Dec. 3, 1999

Respectfully submitted,
